Quadratics - practice set

1. Solve x^2 - 5x + 6 = 0.

2. Write y = x^2 - 6x + 5 in vertex form.

3. Factorise 2x^2 + 3x - 2.

4. The curve y = x^2 + bx + c passes through (1, 0) and (3, 0). Find b and c.

5. Sketch y = (x - 2)^2 - 4, marking the vertex and intercepts.
